*Penis Enlargement*

With approximately 60% of men unhappy with their penis size, we're proud to be Sydney's Leading Non-Surgical Enlargement Clinic performing minimally invasive penis enlargements.

With no downtime and no risky, complicated surgery, it's no wonder why this procedure is so popular.

Contour Clinics can increase your penis size with just one treatment. Our safe, in house procedure provides immediate, and dare we say, lifechanging results.

Contour Clinics combines over 20 years of research using techniques proven to be safe and effective. Our unwillingness to experiment, along with strict adherence to clinically proven techniques is why we are the most respected, safest and highly rated penis enlargement clinic in Sydney. We have successfully treated hundreds of men who want to feel and look more confident.

# Who We Can *Treat*

Non-surgical penis enlargement is all about increasing confidence. It's suitable for anyone (over the age of 18 with no serious medical conditions) wanting to quickly and safely improve the size of their penis.

Consultation with one of our doctors is required prior to treatment, during which time you can discuss achievable outcomes and goals from the procedure.

# The Procedure

In our new purpose-built clinic setting, you'll have a professional yet relaxed consultation to discuss any relevant medical conditions, the procedure itself, any potential complications, likely outcomes and whether you have any specific concerns. Following this, an augmentation plan is carefully agreed upon, with your size and sensation goals in mind. The area is numbed and marked, before specialised dermal fillers

are placed using a technique fostered over decades of research. The maximum volume placed in a single session is 15ml in the shaft and 3ml in the glans. Many men opt to have progressive top-ups until their goals are achieved. The process of adding the volume to the penis takes about 10 – 15 minutes. There is minimal discomfort during the procedure, with the option of happy gas provided on request.

# Erection Enhancement

Contour Clinics brings you the latest advances in Cosmetic Medicine.

Known as P-Boosting this procedure has been shown to increase sensation,

rejuvenate the penis, improve circulation, improve strength of erections and there are reports of increased penis size.

This treatment is delivered using our unique Pure PRP, which uses your own blood plasma to stimulate the penis and its rejuvenation.

# The Results

Our most popular treatment package of 10ml provides approximately 1-inch increase in penile girth and 0.5 inch in length.

For those wanting larger size options we have higher volume packages available.

For those suffering from premature ejaculation, our glans filler provides added volume as well as improved control of ejaculation during those intimate moments.

Studies have shown results last out to 5 years. We have found full results are maintained out to 24 months, with slow reabsorption of filler taking place over the next 3 years. Many men elect to have small top ups every 18 -24 months to maintain results.

# Safety

The technique used at Contour Clinics has been proven safe over more than two decades of research and practice.

Redness and swelling are common after the procedure and are treated with a cool compress or ice packs. Serious side effects that have been documented are very rare and usually related to poor injection technique or use of inappropriate fillers. The procedure can be reversed if necessary. Bruising can occur but is usually mild.

# Testimonials

*Robert H*

Great clinic, everything went like clockwork. I walked away really happy. I thought that I was not going to go through with it, right up to two days beforehand. It's a hard decision to take, or least it was for me. Its nerve wracking leading up to it, but once you are at the clinic its fine. I was one of three on that day, so I felt better knowing I was not the only one. The staff are great, professional and make you feel relaxed. Thank you

*Julian C*

I have always been slightly insecure about my penis size since I can remember. I had done heaps of research into the best solution and had read about enlargement injections. The best thing about this was the safety. There was no risk of sensation loss or performance problems and the pain level of the procedure was very low. Even though I was still a little scared I decided to go ahead with the procedure.

I choose Contour Clinics because of their Doctor. After speaking with him I immediately felt at ease and new I was with a professional. After the procedure I was sore for a few days but nothing serious. I can now say that sex with my partner is far more enjoyable. We are both so happy we decided to do this procedure.

*Vijay K*

I have been very happy with Contour Clinics. Everything was straight forward from the initial consultation to the penis filler procedure. The Clinic and the staff are well organised and professional. I am happy I choose this clinic.

*Sidd B*

Initially I was interested in penis surgery but decided it was a step too far in my personal circumstances. The realisation that penis lengthening surgery would be unlikely to make me any longer when erect tipped the balance towards fillers.

I am now three weeks out from the procedure and I could not be happier at this stage although some of the size has reduced as there was some swelling in the first week. I wish I had gone for the larger package but I have no hesitation recommending Contour for penis enlargement fillers, very happy now I just have to find someone to try it out on.

# Faq's

## 1) How much bigger will my penis be after the procedure?

On average we see 1 inch (2.5 cm) increase in girth and 0.5 inch (1.25 cm) increase in length. Our larger treatment packages offer our patients larger gains than the average. In our experience it is generally thickness that is the greatest priority for our patients.

## 2) How long does the treatment take?

Its quick and easy. The treatment takes 30 - 45 minutes and your free to go home straight after the procedure. The adding of volume to the penis takes about 10 - 15 minutes.

## 3) Where are the treatments carried out?

The treatments take place at one of our purpose-built rooms at Contour Clinics Five Dock, in Sydney.

## 4) Do I need to take time off work?

You do not need to take time off work. However, you may be sore for a few days so one or two days may be helpful. After a non-surgical penis enlargement avoid contact sports and heavy lifting for 7-10 days.

## 5) Can I have sex straight after the treatment?

No. We recommend abstaining for one week post a non-surgical penis enlargement and 48 hours post a non-surgical glans enhancement.

## 6) What about aftercare?

We have extremely thorough post care procedures at Contour Clinics. We provide you with take home information on the day of your procedure and we are available 24/7 for any questions or help you may need post procedure

## 7) Will this give me more confidence?

Yes, that's precisely what this procedure is all about! To give you self-confidence, wherever you go - in the bedroom, in the changing rooms, on the beach, in the gym. This is one of the most important effects of the treatment - making you feel better about yourself all day, every day.

## 8) How does the consultation process work at Contour Clinics?

All our Enlargement Consultations are done with Dr Josh, the Medical Director at Contour Clinics. It is a free initial consultation to talk through the whole procedure and answer any questions or concerns you may have. It's natural to be a little nervous, but really there are no questions that are too sensitive. We are here to put your mind at rest and send you away happy.

## 9) Can I afford the treatment?

If you aren't able to pay in one go, to make penis enlargement procedures attainable for those who want them, we offer different payment options to suit you so you are able to finance some or all the procedure through Zip Pay.

# I'm Interested

The first step to a bigger, more confident self is a confidential consultation with our Medical Director Dr Josh Wall. During the consultation you can discuss your size goals and expectations as well as any questions or concerns you may have.

Your enlargement treatment experience including your consultation, numbing and filler placement takes approximately 60 minutes and can be completed in one visit. For those with larger size goals, 2-3 treatments spaced 2 weeks apart may be necessary.
